

We at **McDantim, Inc.** are in the business of designing and selling equipment for dispensing beer. That means we have certain responsibilities, including making equipment that is safe, reliable and performs very well. Additionally, our equipment, especially our **Trumix™** Gas Blenders, are used in a way that affects beer quality. We believe that involves extra responsibility.

We believe and practice the following:

Beer is a blend of science and art!

It deserves respect and proper handling.

The purpose of a draught beer system is to protect and dispense beer so that it is precisely the beer the brewer has produced.

Carbon Dioxide (CO₂) is an ingredient in the beer.

The draught system should maintain CO₂ levels in the beer, as changing CO₂ content changes the taste and quality of the beer.

We believe these concepts. Our products and sales efforts are intended to produce these end results. In working with us we hope you already feel this way and use our equipment for this reason. We hope also that the tools and information you find in the pages that follow will make you more effective in your sales and troubleshooting efforts. If we can do anything to help please let us know.

P.S. We hope you take as much pleasure in this art form as we do.
